

Company Profile

Seaside, the Energy Service Company of the Italgas Group

About Seaside

We are the Energy Service Company (ESCO) of the Italgas Group and for years we have been bringing innovation to the energy efficiency market. The use of the most updated technologies and dialogue is the basis of our approach: a smart attitude dedicated to energy efficiency for the sake of the environment and people, combining tailor-made consultancy for private customers and national and international companies.

Innovation and customization

Starting a path towards a more virtuous and digitized use of energy

today is possible with Seaside. We offer to all our customers the most complete and tailor-made consultancy for every need.

Developed through the management of TEE, today we are constantly working on improving production efficiency and eco-compatibility of energy by investing in new technologies.

machine learning elaborations developed

Sustainability is in our DNA

As ESCo of the Italgas Group, we believe in sustainability as the cornerstone of our work and a guarantee of sustainable growth for a better future. Through our services and CSR projects, we contribute to the creation of sustainable and smart cities, and the generation of long-term value for our customers, the market, the territory, and all its stakeholders, while respecting the environment.

New business horizons

With the acquisition of know-how in integrated energy services and project financing, today we can guarantee concrete solutions also for public and private sectors, combining efficiency and energy saving, through integrated services such as district heating, cogeneration, and public lighting.

Seaside is a certified ESCo UNI CEI 11352:2014

Innovative solutions for energy management and sustainability

Join our journey into energy efficiency

Efficiency.
Innovation.
Sustainability.

2010

Seaside is born

The synergy of a group of experienced entrepreneurs gives life to Seaside, in the name of renewable energy and energy efficiency.

2012

UNI CEI 11352:2014

AEEG (Regulatory Authority for Energy, Networks, and the Environment) recognizes Seaside as an Energy Service Company (ESCO) with a high rate of innovation for its sector.

2014

SaveMixer™ is released

Seaside launches its first energy intelligence software designed for energy managers, companies in the industrial and commercial sectors.

2018

Italgas Group

Seaside becomes the ESCo of Italgas Group, the first operator in Italy in the distribution of gas and the third in Europe.

2021

Leadership

Seaside confirms its leading position as one of the most complete ESCo on the market thanks to its wide range of solutions for energy efficiency.

Our products and energy services

Our digital soul is the key to constantly innovating the energy sector and guiding it towards the conscious use of resources and respect for the environment.

Energy management and project financing

CONSULTING SERVICES AND SOLUTIONS

We offer to business customers consulting services and solutions by acting on three main areas: replacement of technologies to maximize energy efficiency, management improvements to optimize plants and production processes, training of people to bring sustainability and energy efficiency within the corporate culture.

Predictive Energy Analytics

SAVEMIXER™

Seaside's proprietary software of Predictive Energy Analytics which, starting from predictive consumption models, is able to intervene in advance to prevent waste and reduce a company's energy costs, have cost forecasts, and intervene in replacements or maintenance before having a breakdown.

From data collection to consultancy, from scenario analysis to reporting.

Building Energy Renovation

SAVEGAS

The energy building redevelopment service without any outlay, thanks to the 110% Superbonus established by the "Decreto Rilancio" (Italian decree aimed at re-launching the economy). Through cutting-edge solutions, we act as a General Contractor and take care of the interventions in their entirety: from carrying out the work itself to handling the paperwork.

The type of interventions proposed allow significant reductions in polluting emissions, such as CO₂, SO₂, and particulate matter.

Reducing energy waste means improving energy performance and market value by up to 20%.

The training offer for companies and professionals

SEASIDE ACADEMY

Seaside Academy offers training that focuses on the latest regulatory updates and developments in the energy sector. It offers in-depth courses on the main certifications and key roles in the energy sector. Born to transform and shape the skills of professionals and entire companies, today it offers more than 80 training and refresher courses both on-site and online.
